JED LYLE FERNANDEZ

Senior Software Engineer | Systems Architecture & Technical Leadership

Metro Manila, Philippines | +63 945 502 7821 | fernandezjedlyle@gmail.com | https://www.linkedin.com/in/jed-lyle-fernandez-160239142 | progressiveparanoia.github.io

PROFESSIONAL SUMMARY

Senior Software Engineer with 8+ years of experience developing game systems, backend-integrated applications, and internal developer tools. Experienced in software architecture, reusable systems, performance optimization, and cross-functional technical leadership. Proven ability to improve development workflows, mentor engineers, and deliver maintainable solutions across client, server, and web environments.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, Go

Backend & Services: Node.js, Express, Nakama, PlayFab, REST APIs, MongoDB, PostgreSQL

Web & Game: React, Vue.js, Unity, Cocos Creator

Infrastructure & Tools: AWS, Docker, Git, Unity Cloud Build

Engineering: Software Architecture, Multiplayer Systems, Performance Optimization, Developer Tooling, Code Review, Technical Design

AI-Assisted Development: GitHub Copilot, Claude Code, Codebase Analysis, Technical Planning, Implementation Workflows

PROFESSIONAL EXPERIENCE

MeSo Labs

Game Developer (Freelance) | Sep 2025 – Present

- Built an internal game configuration and live-operations dashboard using TypeScript, React, and Node.js, enabling teams to visualize configuration data, validate content, and generate SQL exports.
- Developed reusable gameplay and progression systems, including missions, daily rewards, upgrades, and inventory, with backend-integrated functionality.
- Investigated and optimized runtime memory usage and asset-loading behavior in a Cocos Creator application, improving startup and runtime memory consumption.
- Improved client architecture through reusable components, centralized UI navigation, and resolution of dependency and lifecycle issues.
- Collaborated across engineering and design teams to establish development standards and improve technical workflows.

Limit Break

Unity Engineer | Jun 2024 – Mar 2025

- Extended internal development tools used by designers and engineers to streamline game-level creation and feature implementation.
- Debugged and optimized existing gameplay systems while collaborating with cross-functional production teams.

Narrasoft Inc. — Assigned to Innplay Labs / Playtika

Senior Unity Developer → Team Lead → Unity Tech Lead (Ext.) | Jul 2021 – May 2024

Client-designated title: Unity Tech Lead (Ext.), Oct 2023 – Apr 2024

- Provided technical leadership and mentorship for up to five developers, collaborating with international engineering and technical art teams.
- Architected reusable gameplay systems and modular UI components integrated across multiple game titles, reducing duplicated development work.

- Introduced a collaborative technical design workflow adopted by the development team, enabling earlier identification of logic issues and clearer implementation planning.
- Developed Unity/C# systems integrated with Nakama server-side game logic, PlayFab configuration services, and AWS infrastructure.
- Developed cross-platform deep-linking and referral functionality, alongside Vue.js and Node.js tooling that enabled live-operations teams to generate links independently.
- Investigated and resolved asset-management and performance issues, including redundant cleanup operations contributing to runtime hitching.
- Conducted code reviews, supported release testing, and participated in developer hiring and technical evaluations.

Selected titles: Animals and Coins, Tiles of Fortune

NSTBG Philippines

Game Developer | Oct 2019 – Jun 2021

- Developed custom matchmaking and PvP systems for Murasaki7 using Unity and PlayFab.
- Built Addressables-based audio systems for dynamic asset loading and memory management.
- Created Excel-to-Unity data conversion and character-audio localization tools for designers and developers.

Anino Inc.

Software Engineer | Sep 2018 – Oct 2019

Previous internship: Aug 2017 – Mar 2018

- Developed social and gameplay systems for Double Win Vegas, including chat, clubs, shops, and social lobbies.
- Built internal live-operations, QA, and analytics tools, with additional server-side work using Ruby on Rails and MongoDB.

EDUCATION

FEU Institute of Technology

Bachelor of Science in Information Technology, Major in Animation & Game Development | 2014 – 2019
